

Global Health Student Research Teams

Overview:

The *Global Health Student Research Teams* program offers a transformative learning experience that empowers undergraduate students to address local and global health challenges through collaborative research. The program prioritizes understanding the social determinants of health, cultural sensitivity, and data-driven solutions.

Research Structure:

- Three projects offered per academic year
- Teams of three to five students

Student Learning Objectives:

- Connect with global health mentors, Notre Dame faculty, and community partners
- Engage in experiential learning activities
- Develop critical thinking and problem-solving skills
- Strengthen capacity for successful multidisciplinary collaborations to address health disparities and improve health outcomes

Requirements:

- Membership in the Global Health Club of Notre Dame
